As a salesman, I want to be able to calculate a different discount whether the customer is a private person or a company so that each discount is adapted to the target market

Context

The company wants to adapt the discount to the customer type.

Technical Spec

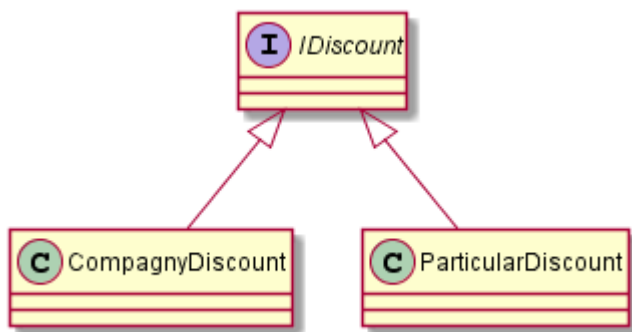

Figure 1. The PlantUML block extension class

The customer table has to contain the customer type information

```
ALTER TABLE sales.customer ADD type CHAR(1) enum('P','E') NOT NULL ;
```
